

UI/UX Design Essentials

Master design principles, wireframing, prototyping, and user research methodologies.

Welcome to the course! This document contains all the materials, lessons, and exercises you will need to successfully complete the curriculum. We recommend reading through this guide carefully and taking notes as you progress.

Category: Design | Level: Beginner | Est. Time: 8 Hours

Course Objectives & Overview

By the end of this course, you will have a solid understanding of the core concepts, practical applications, and best practices associated with this topic. This structured material is designed to guide you step-by-step from foundational theories to advanced problem-solving techniques.

Ensure you complete all practical exercises and review the lesson summaries before attempting the final exam.

Lesson 1: Design Principles

Great UI/UX is built on timeless design principles.

- Visual Hierarchy: Guide the user's eye using size, weight, color
- Contrast: Ensure readability — WCAG AA requires 4.5:1 ratio for text
- Alignment: Create order and structure
- Proximity: Group related elements
- Repetition: Establish consistency
- White space (negative space): Give elements room to breathe
- Color theory: Primary/secondary/tertiary, complementary, analogous, triadic
- Typography rules: Never use more than 2-3 typefaces
- Gestalt principles: Similarity, continuity, closure

Key concept: Good design is invisible — users accomplish their goals without noticing the interface.

Key Takeaways:

- Review the main concepts outlined above.
- Practice the techniques discussed.
- Write down any questions for further research.

Conclusion & Next Steps

Congratulations on reaching the end of the written material for this course! Your next step is to log into the platform and take the final assessment. Review your personal notes, ensure you understand the key takeaways from each lesson, and apply what you have learned.

Good luck!
